## RESEARCH

---

### *NSF Research Fellowship*

- Current    **Focus Constructions, Complementizer Dropping, and Definite Clause Deixis within Subordinate Clauses in Guadeloupean Creole.**  
Field research documenting syntactic phenomena in Guadeloupean Creole. Combined expertise in computational linguistics and syntactic theory to create three experiments, evaluating speaker intuitions and eliciting complex constructions. (NSF Award No. 1952501)  
*Supervised by Isabelle Barrière, Béatrice Jeannot, and Renauld Govain.*

### *Master’s Thesis*

- Current    **Leveraging NLP in Syntactic Data Analysis.**  
Developing an ASR model for Guadeloupean Creole using field-collected speech data to aid language documentation and analysis of syntactic features such as focus and complementation. Integrating NLP with field linguistics to address data processing bottlenecks and promote language technology access for speakers of understudied languages. *Supervised by Jaklin Kornfilt.*

### *Relevant Graduate Projects*

2025	<b>Referent Tracking and Nonbinary “They” in Apparent Time: Age Effects and the Role of Gender Cues.</b> Designed a psycholinguistic storyboard narration task examining referent tracking strategies with nonbinary they. I reveal a generational gap in usage, with older speakers producing more errors and greater reliance on pronoun avoidance strategies.
2025	<b>NLP methods for low-resource language documentation: A case study on Guadeloupean Creole.</b> Developed a custom grapheme-to-phoneme (G2P) model for Guadeloupean Creole to evaluate NLP methods for low-resource language documentation, achieving a 2.8% Phoneme Error Rate—significantly outperforming pre-trained models.
2024	<b>The Passives were Analyzed: Comparing model performance in classifying passive use in news headline bias.</b> Fine-tuned BERT and ChatGPT models to classify media bias in headlines about the 2004 Israel-Palestine conflict, focusing on passive voice and agent omission. Achieved 89% accuracy with fine-tuned ChatGPT, outperforming baseline heuristics and LLMs.
